PROFESSIONAL SUMMARY

Data Engineer with 3+ years delivering measurable business impact at scale—75% faster ETL processing, 18% cost savings, and enterprise frameworks adopted company-wide. Specialized in real-time streaming architectures (Kafka/Spark Streaming) and cloud-native solutions on AWS processing 500K+ events/hour for 190K+ employees. Expert in Python, PySpark, Scala, and Databricks with proven success in data governance, privacy compliance (PII deletion systems), and modernizing legacy workloads to Kubernetes. Co-creator of enterprise Scala ETL framework and semantic data models driving self-service analytics across Finance, Procurement, and Workforce domains.

TECHNICAL SKILLS

- **Languages:** Python, Scala, SQL, PySpark, Bash
- **Data Engineering:** Apache Spark (Streaming), Kafka, Databricks, Airflow, Snowflake, Iceberg, Delta Lake
- **Cloud & Databases:** AWS (S3, Glue, Athena, Step Functions, EKS, Lambda), Teradata, PostgreSQL, MySQL
- **DevOps & BI:** Kubernetes, Docker, Terraform, Git, GitHub Actions, Concourse CI/CD, Looker (LookML)

EXPERIENCE

- **Comcast** Chennai, Tamil Nadu
Data Engineer II *Feb 2024 - Present*
 - Architected Mega View analytics platform consolidating HR data from 15+ disparate sources across Workday, SAP, and legacy systems using 30+ production ETL pipelines—achieving 75% reduction in processing time and enabling real-time workforce insights for 190K+ employees and executive leadership
 - Built real-time streaming architecture using Kafka and Spark Streaming processing 500K+ events/hour for workforce analytics, reducing data latency from hours to minutes and enabling same-day operational decision-making
 - Designed and deployed automated GDPR-compliant PII deletion system handling customer “right to be forgotten” requests across Comcast and NBCU platforms using Apache Iceberg and Delta Lake—created AWS orchestration workflows (Glue, Step Functions, EKS) ensuring bi-directional sync and instant Snowflake propagation
 - Co-developed enterprise-wide Scala ETL framework with PySpark integration adopted by 5+ engineering teams, reducing new pipeline development time by 40% and standardizing data quality checks, error handling, and monitoring patterns
 - Led Kubernetes migration of 50+ legacy Informatica workflows, reducing manual operations by 60% and infrastructure maintenance costs by 18% through containerization and automated scaling
 - Recovered 200+ days of CEO-critical financial reporting data during emergency platform migration by reverse-engineering legacy Teradata schemas and building parallel validation pipelines—maintained zero data loss and business continuity
- **Comcast** Chennai, Tamil Nadu
Data Engineer I *June 2022 - Feb 2024*
 - Designed and implemented Concourse CI/CD pipelines for 10+ data engineering teams with automated SonarQube quality gates and Checkmarx security scanning—reduced deployment failures by 40% and accelerated release cycles from weekly to daily
 - Built Python-based ETL pipelines processing 2M+ employee records daily for workforce analytics dashboards used by VP-level leadership for headcount planning and budget allocation decisions
 - Automated infrastructure provisioning for data applications using Terraform and Bash scripts across 20+ Linux servers, reducing deployment time from 4 hours to 15 minutes and eliminating configuration drift
 - Developed data quality framework with automated anomaly detection alerts using PySpark, catching critical data issues before impacting downstream reports and reducing incident response time by 65%
 - Awarded Champ Award (top 5% of department) for CI/CD excellence and DevOps contributions that improved team velocity and operational reliability

EDUCATION

- **SRM University-AP** Andhra Pradesh, India
Bachelor of Technology in Computer Science Engineering; GPA: 7.6/10 *2018 - 2022*
