Professional Summary

Results-driven Data Engineer with over 4 years of experience designing and optimizing scalable ETL/ELT data pipelines using SQL and cloud platforms. Demonstrated expertise in Snowflake, Talend, and IDP, with a proven record of leading successful migrations, improving data quality, and delivering actionable business intelligence solutions. Skilled in collaborating with cross-functional teams, automating data processes, and implementing best practices to drive performance improvements and support multiple Lines of Business. Passionate about integrating AI and Machine Learning into data workflows to future-proof data solutions and support data-driven decision-making.

Professional Experience

Associate · **Cognizant**

Chennai, India · Aug 2021 - Present

- Implemented and optimized Snowflake data warehouses, including schema design, table creation, and data loading processes to support business intelligence initiatives.
- Designed scalable data frameworks using ETL, Snowflake procedures, AWS, Talend, Unix shell scripts, and DBT, significantly improving system performance and maintainability.
- Developed and migrated multiple ETL pipelines from Talend to IDP, ensuring seamless data transformation and a smooth transition to new frameworks.
- Collaborated with business analysts, data architects, and project managers to deliver robust, scalable ETL solutions, leveraging GitHub, uDeploy, and Jenkins for streamlined deployments.
- Led the migration of manufacturing pipelines for two Lines of Business from Oracle to Snowflake, integrating IDP to replace Talend, resulting in a 70% reduction in processing time and improved data processing efficiency.
- Optimized Snowflake queries and implemented performance tuning strategies to enhance ETL pipeline efficiency.
- Developed scalable data ingestion and processing pipelines using Python and SQL, reducing data reporting delays.
- Improved system performance by 25% through automation with AWS services and advanced logging/database optimizations.
- Established a pre-production environment, defined deployment/testing best practices, and mentored junior engineers on ETL optimization.
- Designed and implemented testing strategies combining manual and automated approaches with Automated Testing Framework (ATF) tools, ensuring high-quality releases.
- Automated data quality checks and error-handling processes, increasing data reliability and reducing manual interventions.
- Increased customer satisfaction by 90% through improved reporting accuracy, faster delivery timelines, and effective system performance monitoring.

Projects

End-to-End Retail Analytics Data Warehouse Implementation using Talend ETL

Talend Snowflake MySQL

- Architected and implemented an end-to-end ETL pipeline using Talend Open Studio to build a dimensional data warehouse for retail analytics.
- Integrated disparate data sources, including flat files (CSV/Excel for product catalogs, store details) and transactional databases (MySQL/PostgreSQL for sales and inventory data).
- Developed complex data transformation jobs using Talend components (tMap, tRowGenerator, tAggregateRow, tConvertType, etc.) to cleanse, normalize, and validate data, ensuring high data quality.
- Implemented Slowly Changing Dimension (SCD) Type 1 and Type 2 methodologies for managing changes in dimension tables.
- Automated the daily ETL workflow using Talend's job scheduling capabilities and implemented error handling/email notification alerts for job failures.
- Loaded the transformed data into a target cloud-based data warehouse (Snowflake) to support reporting and analytics.

Insurance Policy & Claims ETL Project

- Designed and developed end-to-end ETL pipelines using Talend to load insurance policy, claims, and customer data into Snowflake.
- Integrated data from Oracle, MySQL, and AWS S3 sources with complex business transformations.
- Implemented SCD Type-2 for policy and customer dimensions to accurately track historical changes.
- Automated workflows using AutoSys with job dependencies and failure handling.
- Utilized UNIX shell scripts for file validation, monitoring, and job orchestration.
- Optimized Snowflake loads using COPY commands and clustering for improved performance.
- Ensured data quality, reconciliation, and compliance with insurance reporting standards.

Education

Master of Technology · Data Science and Artificial Intelligence · 9.4 CGPA · Sep 2021 - May 2024
SRM Institute of Science and Technology

Bachelor of Engineering · Computer Science and Engineering · 9.0 CGPA · Sep 2017 - May 2021
R.M.K College of Engineering and Technology

Skills

Data Engineering & Cloud Platforms

SQL Development, ETL Development, Snowflake, Talend, IDP, AWS, Database Migration Strategies, SQL Optimization, Performance Improvements, Error Handling, UNIX, Autosys.

DevOps & Automation

Jenkins Udeploy GitHub CI/CD Methodology

AI & Machine Learning

Artificial Intelligence Machine Learning Deep Learning

Achievements

Stellar Achiever Award · Team Lead Dec 2025 - Dec 2025

Received the Stellar Achiever Award for outstanding contributions to data engineering projects, demonstrating technical excellence and leadership.

Environment Setups · Project Experience Dec 2025 - Dec 2025

Independently designed and implemented environment setups (DEV1-DEV6, QAT1-QAT6) within tight deadlines, earning client and leadership appreciation for improving deployment efficiency.

Managed Production Releases · Project Experience Dec 2025 - Dec 2025

Managed production releases for 25+ applications, including serverless upgrades during the EMR upgrade from version 6.3 to 7.1, ensuring minimal downtime and successful transitions.

Certificates

AWS Cloud Practitioner · Certification Jan 2026 - Present

Snowflake Snow Pro Core · Certification Dec 2025 - Present
